

## What are Broken Links and How to check for Broken Links on a website or a webpage ?

Broken Links are links or <a> tags on a html page that don't point to another page or a file.

Broken links means when you click on a broken link you get 404 error message that means file not found on web server.

Website named as [www.deadlinkchecker.com](http://www.deadlinkchecker.com) online checks for broken links on a website or a webpage.

Following is the screenshot to start with the above mentioned website

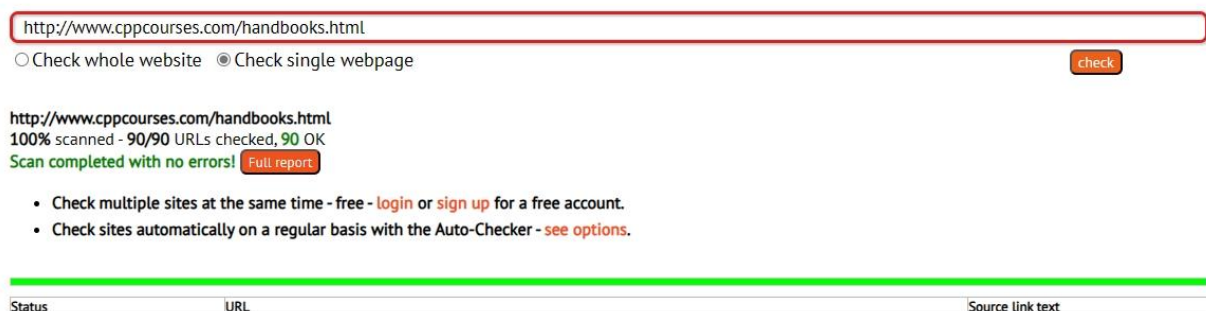

When you will click on check

it will ask for a captcha code, enter that code and this website will check for broken links on

<http://www.cppcourses.com/handbooks.html>

Following is the output after a successful website check
