

Create a Contacts System in C# and Oracle 21c Express Edition using Visual Studio 2022 Community Edition

First of all install Oracle 21c Express Edition from Oracle Website or you can get the link from google

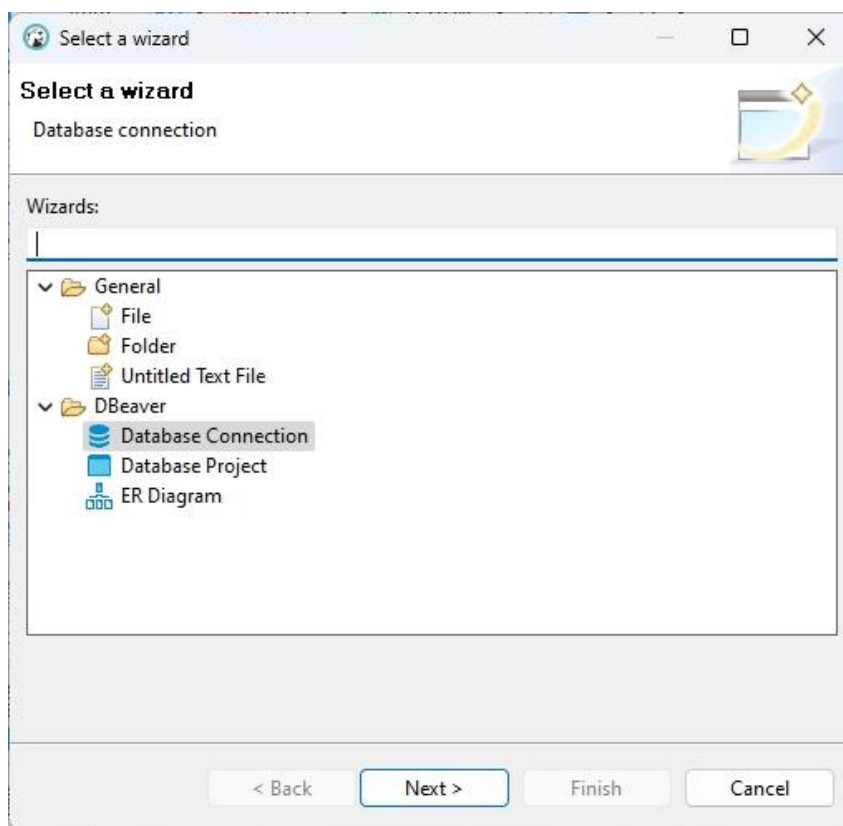

During the setup of Oracle 21c setup will prompt you for password of system, sys or pdba account, remember this password or note it down somewhere, this password will be needed for connecting c# with oracle 21c , I have have this password as abcdef.

To create table contacts I have used Dbeaver to connect to Oracle Database.

Following are the steps to connect to Oracle Database using Dbeaver.

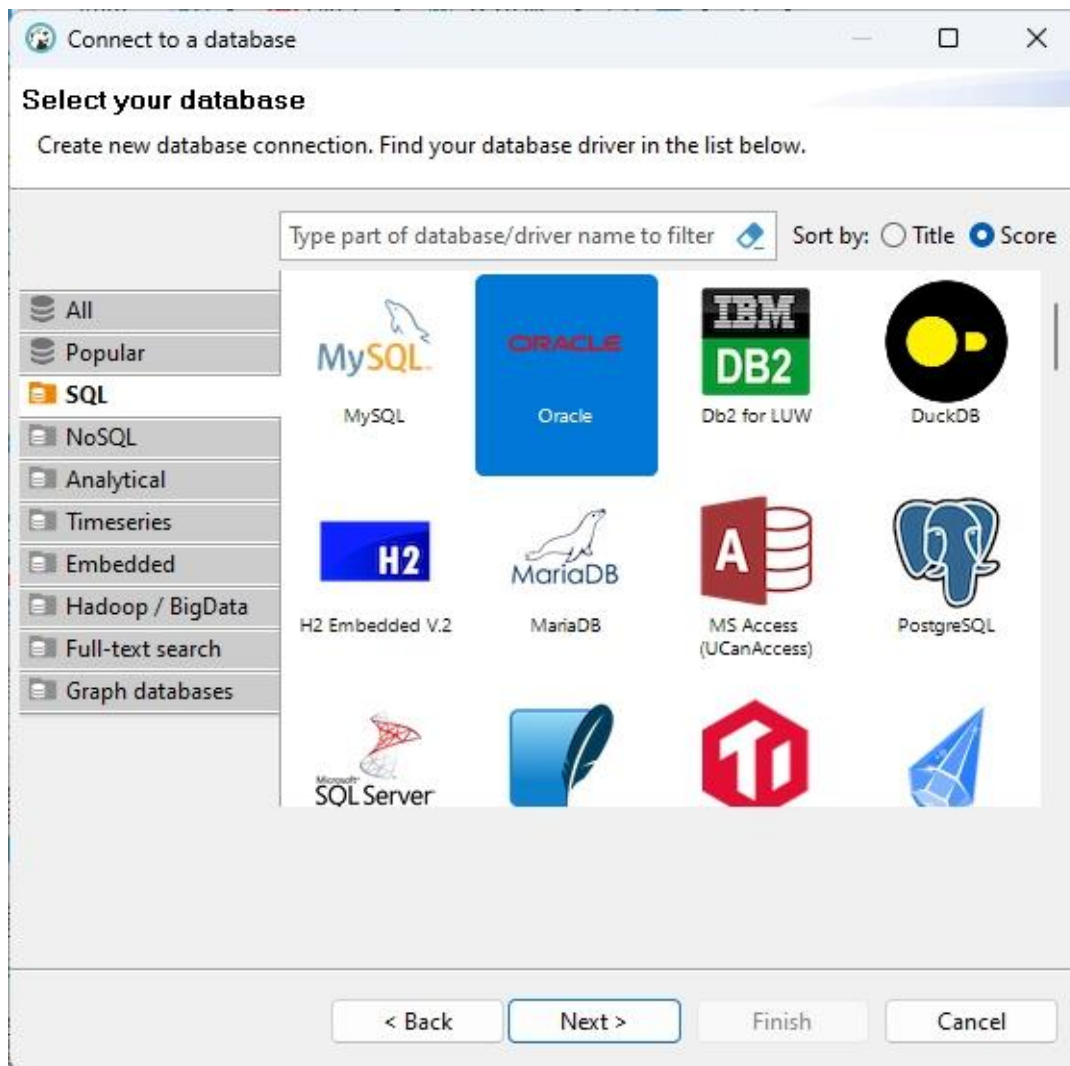

Go to File -> New

Following window will appear

Select Database Connection and Click Next

Following window will appear

Select Oracle and click Next

Following window will appear

Connect to a database

### Oracle Connection Settings

Oracle connection settings

ORACLE

Main | Oracle properties | Driver properties | SSH | Proxy

Connection Type:

Basic | TNS | Custom

Host: localhost Port: 1521

Database: xe SID

Authentication

Authentication: Oracle Database Native

Username: system Role: Normal

Password: ..... ☒ Save password locally

Client: OraDB21Home1

[You can use variables in connection parameters.](#) Connection details (name, type, ...)

Driver name: Oracle Driver Settings

< Back Next > Finish Cancel

Click Finish and You will the following connection on the left side

Right Click on the above option and Click Connect

You will be connected to databasewith SID as xe

Now open SQL Editor and create table contacts by writing the following query

```
create table contacts(cname varchar2(20),caddress varchar2(20),cmobileno varchar2(20),cemail
varchar2(20));
```

Now Start Visual Studio 2022 Community Edition and create a new Windows Form Project

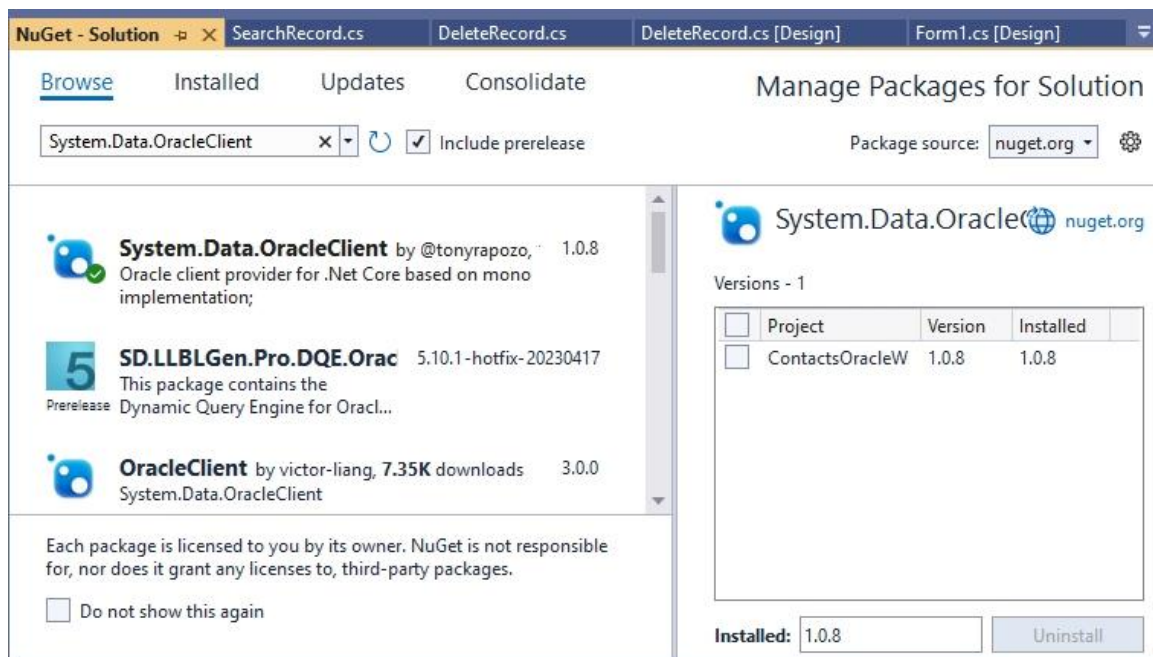

If you are new to this you can take help from

<http://www.cppcourses.com/csharpmysql.pdf>

After creating the project add a Dependency to this project using NuGet Package Manager

Go to Tools -> NuGet Package Manager -> Manage NuGet Packages for Solution

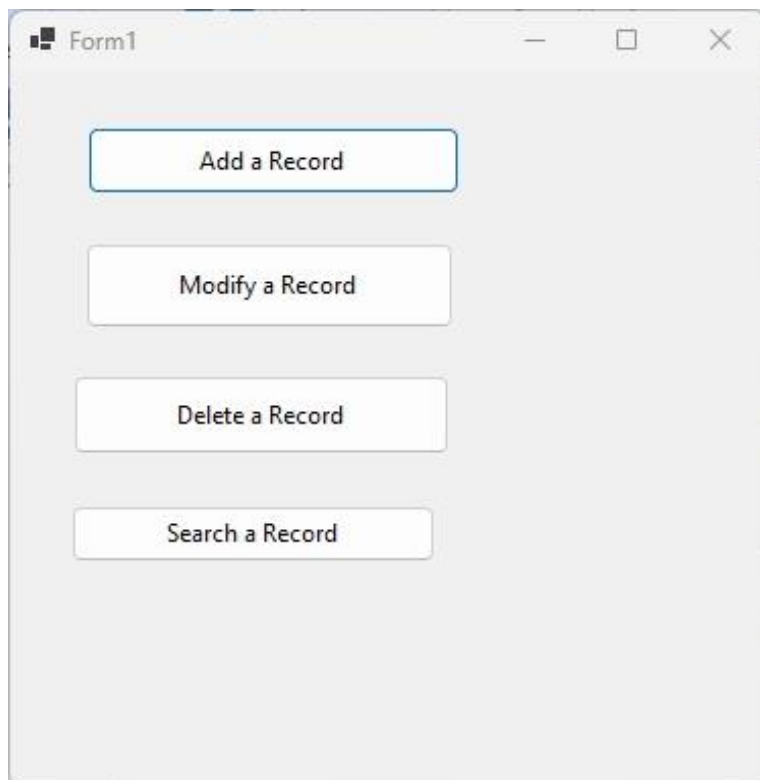

Following window will appear

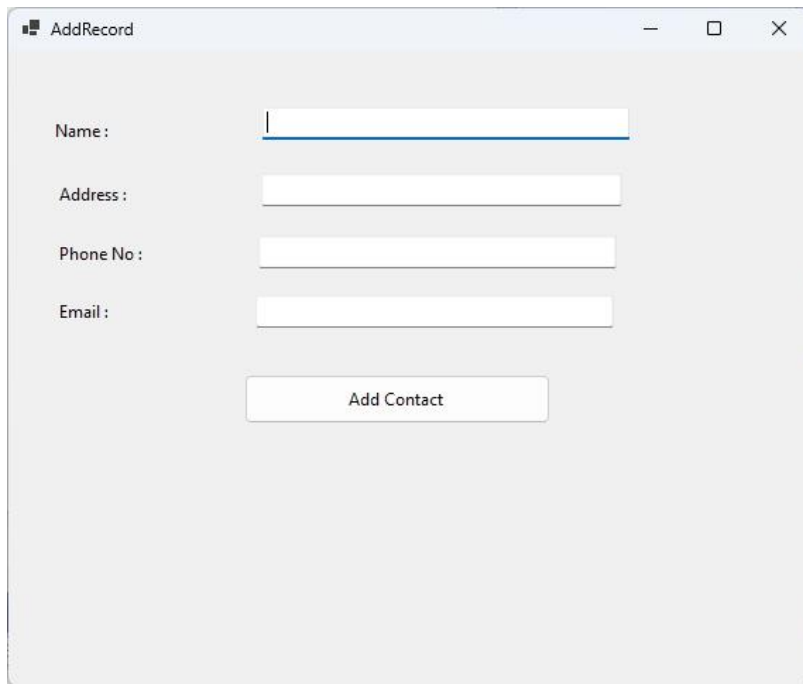

Install System.Data.OracleClient

Create Following Forms in this ContactsMSAccess Application

Form1

AddRecord Form

A screenshot of a Windows application window titled "AddRecord". The window has a standard title bar with minimize, maximize, and close buttons. The main content area is light gray and contains four text input fields stacked vertically, each preceded by a label: "Name:", "Address:", "Phone No:", and "Email:". Below these fields is a single "Add Contact" button.

AddRecord

Name :

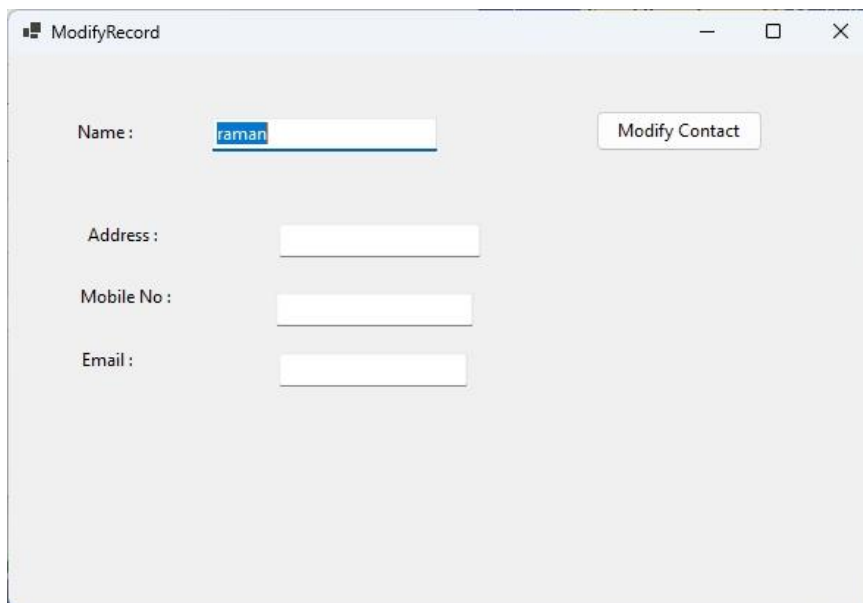

Address :

Phone No :

Email :

Add Contact

### ModifyRecord Form

A screenshot of a Windows application window titled "ModifyRecord". The window has a standard title bar with minimize, maximize, and close buttons. The main content area is light gray and contains four text input fields stacked vertically, each preceded by a label: "Name:", "Address:", "Mobile No:", and "Email:". The "Name" field contains the text "raman" and is highlighted with a blue selection box. To the right of the "Name" field is a "Modify Contact" button.

ModifyRecord

Name :  Modify Contact

Address :

Mobile No :

Email :

### DeleteRecord Form

DeleteRecord

Enter Contact Name to Delete :

Delete Contact

SearchRecord Form

SearchRecord

Enter Complete Name or Partial Name :

Search

Add a DataGridView to Form SearchRecord.

Following are Code for the above forms.

Code for Form1

```
private void button1_Click(object sender, EventArgs e)
{
    AddRecord a = new AddRecord();
    a.Show();
}

private void button2_Click(object sender, EventArgs e)
{
    ModifyRecord a = new ModifyRecord();
    a.Show();
}
```

```

private void button3_Click(object sender, EventArgs e)
{
    DeleteRecord a = new DeleteRecord();
    a.Show();
}

private void button4_Click(object sender, EventArgs e)
{
    SearchRecord a = new SearchRecord();
    a.Show();
}

```

---

Following is the code for AddRecord Form

Following are the using statements

```
using System.Data.OracleClient;
```

Following is the code for Add Contact Button

```

string oradb = "Data Source=(DESCRIPTION = " + "(ADDRESS = (PROTOCOL = TCP)(HOST =localhost)(PORT = 1521))" + "(CONNECT_DATA = " + "(SERVER = DEDICATED)" + "(SERVICE_NAME = XE)))";
string namestr = textBox1.Text;
string addressstr = textBox2.Text;
string mobilenostr = textBox3.Text;
string emailstr = textBox4.Text;
OracleConnection conn = new OracleConnection(oradb);
conn.Open();
OracleCommand cmd = new OracleCommand("insert into contacts values('"
+ namestr + "','" + addressstr + "','" + mobilenostr + "','" + emailstr +
"')",conn);
int rs;
rs = cmd.ExecuteNonQuery();
if (rs > 0)
{
    MessageBox.Show("Record Inserted");
}
else
{
    MessageBox.Show("Record Can't be Inserted");
}
conn.Close();

```

---

Following is the code for ModifyRecord Form

Following are the using statements

```
using System.Data.OracleClient;
```

Following is the code for Modify Contact Button

```

string namestr = textBox1.Text;
string addressstr = textBox2.Text;
string mobilenostr = textBox3.Text;
string emailstr = textBox4.Text;
int rs = 0;
string oradb = "Data Source=(DESCRIPTION = " + "(ADDRESS = (PROTOCOL = TCP)(HOST =localhost)(PORT = 1521))" + "(CONNECT_DATA = " + "(SERVER = DEDICATED)" + "(SERVICE_NAME = XE)))";
OracleConnection conn = new OracleConnection(oradb);
conn.Open();

```

```

        using var cmd = new OracleCommand("update contacts set address='" +
addressstr + "',cmobileno='" + mobilenostr + "',cemail='" + emailstr + "' where
cname = '" + namestr + "'", conn);

        rs = cmd.ExecuteNonQuery();
        if (rs > 0)
        {
            MessageBox.Show(rs + " Contacts Record Updated");
        }
        else
        {
            MessageBox.Show("Contact Record can't be Updated");
        }
    }

```

---

Following is the code for DeleteRecord Form

Following are the using statements

```
using System.Data.OracleClient;
```

Following is the code for Delete Contact Button

```

string cname = textBox1.Text;
string oradb = "Data Source=(DESCRIPTION = " + "(ADDRESS = (PROTOCOL =
TCP)(HOST =localhost)(PORT = 1521))" + "(CONNECT_DATA = " + "(SERVER = DEDICATED)"
+ "(SERVICE_NAME = XE)))"; + "User Id=system;Password=abcdef;";
OracleConnection conn = new OracleConnection(oradb);
conn.Open();
OracleCommand cmd = conn.CreateCommand();
cmd.CommandText = "delete from contacts where cname='" + cname + "'";
cmd.Connection = conn;
cmd.ExecuteNonQuery();
MessageBox.Show("Contact Record Deleted");
conn.Close();

```

---

Following is the code for SearchRecord Form

Following are the using statements

```
using System.Data;
using System.Data.OracleClient;
```

Following is the code for Search Button

```

string cnamestr = textBox1.Text;
string oradb = "Data Source=(DESCRIPTION = " + "(ADDRESS = (PROTOCOL =
TCP)(HOST =localhost)(PORT = 1521))" + "(CONNECT_DATA = " + "(SERVER = DEDICATED)"
+ "(SERVICE_NAME = XE)))"; + "User Id=system;Password=abcdef;";
OracleConnection conn = new OracleConnection(oradb);
conn.Open();
string q = "SELECT * FROM contacts WHERE cname LIKE '%" + cnamestr +
"%'";

using OracleDataAdapter a = new OracleDataAdapter(q, conn);
using DataTable t = new DataTable();
a.Fill(t);
dataGridView1.DataSource = t;

```
