

What is Hibernation in Windows?

Hibernation means that if you are working on a windows laptop and you have some applications opened and currently working on these applications like you have written some text in notepad and you hibernate your computer then when you will start your computer next time notepad will be opened and the text you have typed will be there no matter you have saved the text file or not.

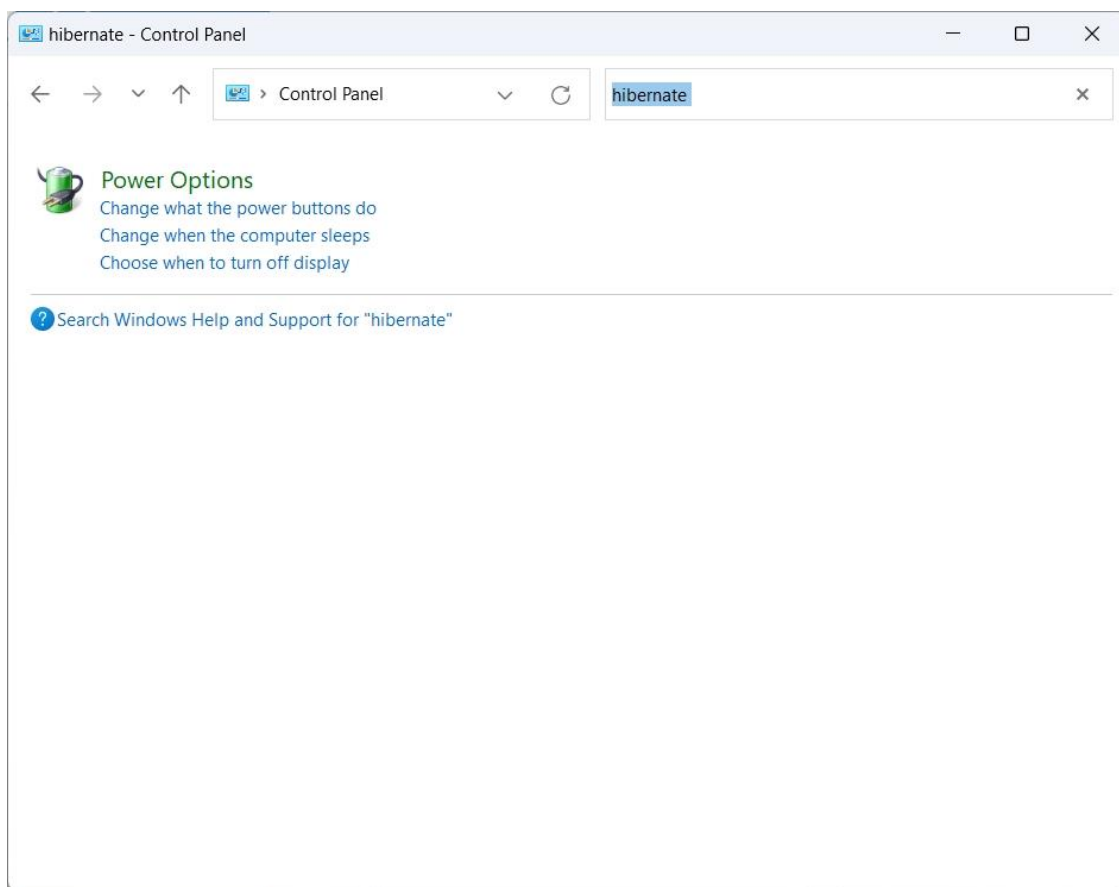

Following are the steps to enable Hibernation on Windows Laptop.

Type [Control Panel](#) in Windows Search Bar and press enter

Control Panel will open up

And then type [hibernate](#) in search bar

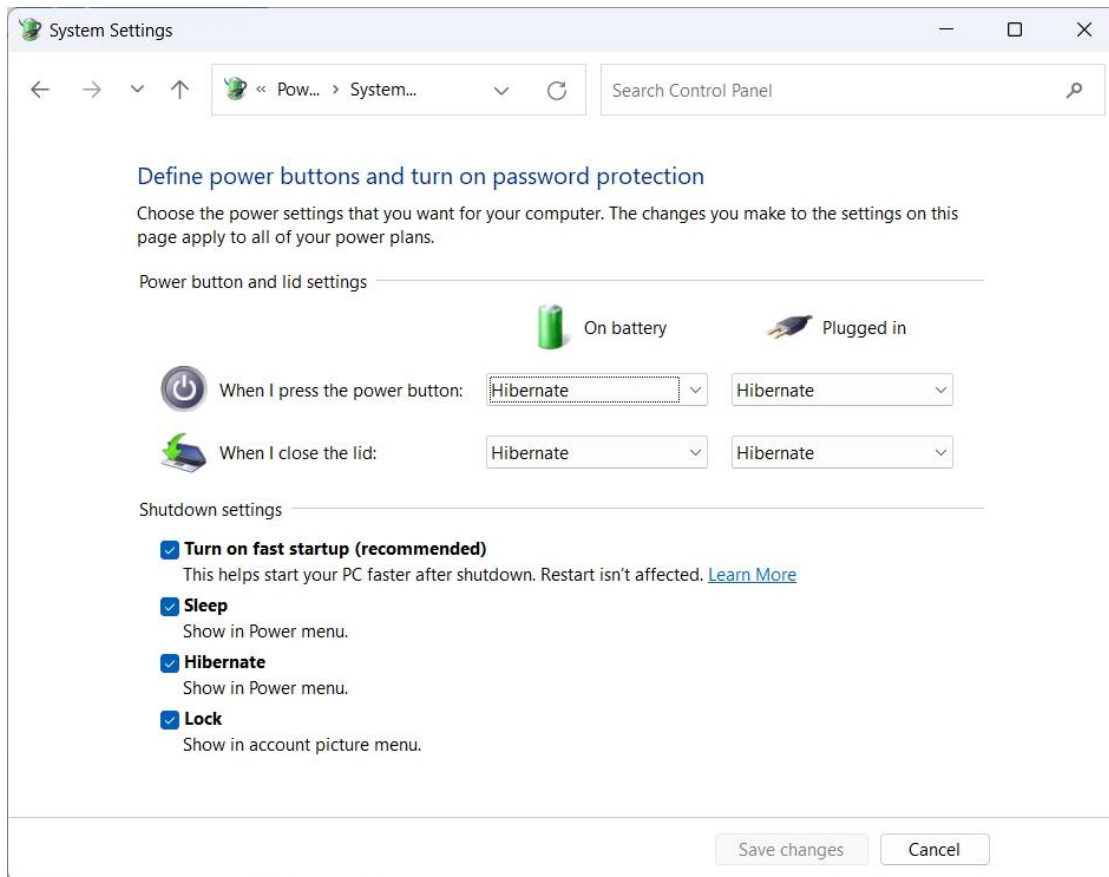

You will see the following window

Click on [Change what the power buttons do](#)

Click on [Change Settings that are currently unavailable](#)

Following window will appear

Click on Save Changes

And now you will have option to Hibernate computer.
