

POSTMAN is a software that lets you send

GET

POST

PUT

DELETE

PATCH

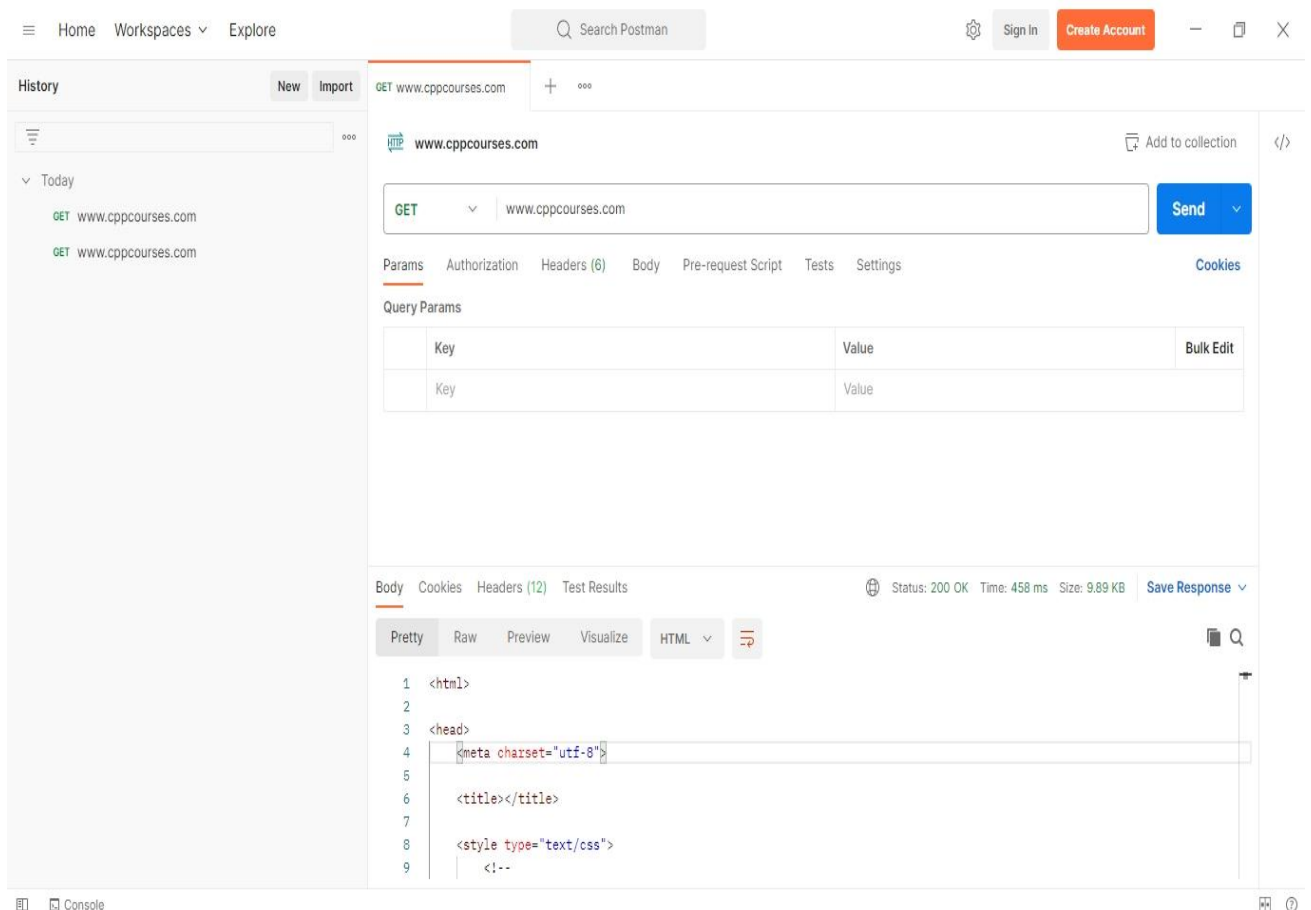

HEAD

OPTIONS

request to a website or web server.

In the following window we have send a GET request to [www.cppcourses.com](http://www.cppcourses.com) and we got following output from the server which is displayed in BODY output tab.

You can also see status as 200 OK which means server executed the request correctly.

In the same way you can send other request methods like POST , DELETE, PUT etc.
