

## Setting up a wireless router in steps

Step 1: open google.com and find router interface ip address

Open the ip address in browser

It was ask for admin username and password

By default admin is the username and pass word is blank

Once you click on login it will open up the intercae of wireless router

Step 2 :

There are two ways in which wireless router can be configured

For dsl connection

It is pppoe connection

And for static internet

It will ask for static ip addresses

Step 3:

To set up a password on wireless router

Just enter a secure password in security and router is setup
